- SEF Optimised Layout
- Suckerfish multi level dropdown menu
- W3C XHTML 1.0 Transitional. W3C CSS 3 Valid
- Cross browser compatibility (IE7, IE8, Firefox, Opera, Safari and Google Chrome)
- Optimized code for search engines which helps in SEO

### **Customizing Joomla! Buzzez Template**

After logging into the Joomla 1.5 administrative You need to install new Buzezz template.

See how to install template on site: [http://docs.joomla.org/How\\_to\\_install\\_templates](http://docs.joomla.org/How_to_install_templates)

Next step - configuration template

#### **Go to: Extensions -> Template Manager**

Click the little radio button, and then click 'edit' on the menu that is at the top of the Template Manager screen. The other way to open the template's configuration is to simply click on the title.

Before you change any the settings in the Buzzez Template configuration, check to see if parameters file is writable. You can do this by changing the file's permissions to 777 via FTP client, or a File Manager Component for Joomla! to do this.

#### **Next step - how change logo**

The logo Buzzez is default sample image logo and you are free to replace with your own. The logo image file is called logo.gif and located in folder joomla\_root\_folder/templates/buzzez/images/. There are 3 stages involved in changing the default logo to your own:

Stage 1: Prepare your own logo image file

First, you need to prepare your own logo image file in some graphic editor like Adobe Photoshop or Fireworks. We recommend you to save your logo in format GIF, but you can use any other as well.

Stage 2: Upload logo image file to your server

Once your logo file is ready, it's time to upload it to your server. You can upload it to any folder under your Joomla! root folder by using standard Joomla! Media Manager or by FTP client.

Stage 3: Setup template parameter to use new logo

If you uploaded your logo to template's images folder overwriting the original file.

You can also use the parameter for a text logo

1. Go to template manager by menu Extensions -> Template Manager.
2. Click on template name Buzzez Joomez.
3. Here in the Template Edit page you will see the list of template parameters in section Parameters. You need to configure following parameters:

#### HEADER LOGO

Type - select type of logo: Image or Text (default is image).

If you have chosen Type: Text, need in the fields below enter the name of your site.

Click button Save.

#### Configuration Main Suckerfish Menu

The main drop-down menu is adaptation of popular Suckerfish menu to Joomla! CMS. By just combination XHTML and CSS it allows you to have clean accessible XHTML code structure and simple yet effective drop-down menu effect. Please make following steps:

1. In module manager click on the menu module you want to use as main menu module. By default, Joomla! 1.5 comes with various menu modules and there is Main Menu module among them. That might be the perfect choice.
2. In module's configuration page setup following parameters:

- Title: Main Menu (or any other you like)
- Show title: No
- Enabled: Yes
- Position: hornav
- Menu Assignment: All
- Menu Name: mainmenu (you might want to use another menu source here)
- Menu Style: List
- Start Level: 0
- End Level: 0
- Always show sub-menu Items: Yes
- Menu Tag ID: empty or any other you like

Drop-down horizontal menus and unlimited sub-menus can be defined. You can choose the two style of horizontal menus in the parameters of the module.
